Preface.....	xv
About the Author.....	xix
Dependency Chart.....	xxi
Chapter 1: Logical Operators.....	1
Helicopter Tour 1	
Section 1: Statements and Truth Values 2	
Section 2: Negations, Conjunctions, and Disjunctions 2	
Section 3: Truth Tables 3	
Section 4: Implications 4	
Section 5: Converses and Contrapositives 5	
Section 6: Logical Equivalence and Biconditionals 6	
Section 7: Hierarchy of Logical Operators 8	
Section 8: Some Useful Logical Equivalences 10	
Section 9: Logical Implication 12	
Section 10: Proofs and Counterexamples 13	
Section 11: Logical Puzzles 18	
Chapter 1 Exercises 19	
Chapter 2: Logical Quantifiers.....	27
Helicopter Tour 27	
Section 1: Predicates and Universes 27	
Section 2: Universal and Existential Quantifiers 29	
Section 3: Negations of Quantifiers 29	
Section 4: Nested Quantifiers 31	
Chapter 2 Exercises 34	
Chapter 3: Sets	41
Helicopter Tour 41	
Section 1: Sets and Their Elements 41	

Section 2: Unions and Intersections 42	
Section 3: Venn Diagrams 43	
Section 4: Subsets and the Empty Set 44	
Section 5: Complements and Differences of Sets 45	
Section 6: Set Theoretic Identities 46	
Section 7: Unions and Intersections of Set Families 49	
Section 8: Power Sets 50	
Section 9: Cartesian Products of Sets 52	
Section 10: The Historical Development of Logic and Sets 54	
Chapter 3 Exercises 57	
Chapter 4: Relations and Functions.....	65
Helicopter Tour 65	
Section 1: Binary Relations 65	
Section 2: Functions 67	
Section 3: Function Images and PreImages 69	
Section 4: One-to-One, Onto, and Bijective Functions 73	
Section 5: Inverse Functions 75	
Section 6: The Composition of Two Functions 76	
Chapter 4 Exercises 78	
Chapter 5: Equivalence Relations and Partial Orderings.....	87
Helicopter Tour 87	
Section 1: Equivalence Relations 87	
Section 2: Congruence Modulo a Positive Integer 90	
Section 3: Equivalence Classes and Their Representatives 92	
Section 4: Two Natural Ways to Create an Equivalence Relation 94	
Section 5: Strings 96	
Section 6: Partial Order(ings) 96	
Section 7: Hasse Diagrams 98	
Section 8: Poset Isomorphisms 100	
Chapter 5 Exercises 102	
Chapter 6: Mathematical Induction.....	109
Helicopter Tour 109	
Section 1: The Principle of Mathematical Induction: Basic Form 109	
Section 2: The Principle of Mathematical Induction: General Form 112	
Section 3: Strong Mathematical Induction 116	
Section 4: Finite Geometric Series 118	
Chapter 6 Exercises 119	
Chapter 7: Recursion	125
Helicopter Tour 125	
Section 1: Infinite Sequences 126	
Section 2: Recursion and Recursively Defined Sequences 126	
Section 3: The Fibonacci Sequence 129	
Section 4: Recursive Sequences of Higher Degree 135	

Section 5: Explicit Solution Methods for Linear Recursion Formulas 139

Chapter 7 Exercises 145

Chapter 8: Some Number Theory..... 153

Helicopter Tour 153

Section 1: Divisibility 153

Section 2: Primes 154

Section 3: The Prime Number Theorem 155

Section 4: Greatest Common Divisors, Relatively Prime Integers 156

Section 5: The Division Algorithm 158

Section 6: The Euclidean Algorithm 158

Section 7: Congruent Substitutions in Modular Arithmetic 163

Section 8: Fermat's Little Theorem 165

Section 9: Euler's Theorem 169

Section 10: Orders and Primitive Roots 171

Chapter 8 Exercises 173

Chapter 9: Representations of Integers in Different Bases 181

Helicopter Tour 181

Section 1: Representation of Integers in a Base b 181

Section 2: Hex(adecimal) and Binary Expansions 184

Section 3: Addition Algorithm with Base b Expansions 187

Section 4: Subtraction Algorithm with Base b Expansions 189

Section 5: Multiplication Algorithm in Base b Expansions 192

Chapter 9 Exercises 195

Chapter 10: Modular Arithmetic and Congruences 201

Helicopter Tour 201

Section 1: Modular Integer Systems 201

Section 2: Modular Inverses 205

Section 3: Fast Modular Exponentiation 208

Section 4: Congruences 210

Section 5: Solving Linear Congruences 211

Section 6: The Chinese Remainder Theorem 213

Section 7: Pseudo-Random Numbers: The Linear Congruential Method 219

Section 8: The Extended Euclidean Algorithm 220

Chapter 10 Exercises 222

Chapter 11: Fundamental Principles of Counting 231

Helicopter Tour 231

Section 1: The Multiplication Principle 231

Section 2: The Complement Principle 235

Section 3: The Inclusion-Exclusion Principle 236

Section 4: The Pigeonhole Principle 239

Section 5: The Generalized Pigeonhole Principle 242

Chapter 11 Exercises 243

Chapter 12: Permutations and Combinations.....	247
Helicopter Tour 247	
Section 1: The Difference Between a Permutation and a Combination 247	
Section 2: Computing and Counting with Permutations and Combinations 250	
Section 3: The Binomial Theorem 255	
Section 4: Multinomial Coefficients 259	
Section 5: The Multinomial Theorem 261	
Chapter 12 Exercises 265	
Chapter 13: Searching and Sorting Algorithms.....	271
Helicopter Tour 271	
Section 1: The Linear Search Algorithm 272	
Section 2: The Binary Search Algorithm 273	
Section 3: The Selection Sort Algorithm 275	
Section 4: The Bubble Sort Algorithm 276	
Section 5: The Quick Sort Algorithm 278	
Section 6: The Merge Sort Algorithm 281	
Section 7: A Randomized Algorithm for Computing Medians 284	
Chapter 13 Exercises 287	
Chapter 14: Growth Rates of Functions and Complexity of Algorithms.....	293
Helicopter Tour 293	
Section 1: A Brief and Informal Preview 293	
Section 2: Big-O Notation 295	
Section 3: Combinations of Big-O Estimates 300	
Section 4: Big-Omega and Big-Theta Notation 302	
Section 5: Complexity of Algorithms 304	
Section 6: Optimality of the Merge Sort Algorithm 307	
Section 7: The Classes P and NP 310	
Chapter 14 Exercises 312	
Chapter 15: Graph Concepts and Properties	319
Helicopter Tour 319	
Section 1: Simple Graphs 320	
Section 2: General Graphs 321	
Section 3: Degrees, Regular Graphs, and the Handshaking Theorem 322	
Section 4: Some Important Families of Simple Graphs 324	
Section 5: Bipartite Graphs 326	
Section 6: Degree Sequences 328	
Section 7: Subgraphs 333	
Section 8: Isomorphism of Simple Graphs 335	
Section 9: The Complement of a Simple Graph 339	
Section 10: Representing Graphs on Computers 340	
Section 11: Directed Graphs (Digraphs) 344	
Section 12: Some Graph Models for Optimization Problems 349	
Chapter 15 Exercises 351	

Chapter 16: Paths, Connectedness, and Distances in Graphs 363

- Helicopter Tour 363
- Section 1: Paths, Circuits, and Reachability in Graphs 363
- Section 2: Paths, Circuits, and Reachability in Digraphs 364
- Section 3: Connectedness and Connected Components 365
- Section 4: Distances and Diameters in Graphs 367
- Section 5: Eccentricity, Radius, and Central Vertices 369
- Section 6: Adjacency Matrices and Distance Computations in
Graphs and Directed Graphs 372
- Section 7: Edge and Vertex Cuts in Connected Graphs/Digraphs 379
- Section 8: Characterization of Bipartite Graphs Using Cycles 381
- Chapter 16 Exercises 382

Chapter 17: Trees 391

- Helicopter Tour 391
- Section 1: Basic Concepts About Trees 391
- Section 2: Rooted Trees and Binary Trees 396
- Section 3: Models with Rooted Trees 397
- Section 4: Properties of Rooted Trees 400
- Section 5: Ordered Tree Traversal Algorithms 403
- Section 6: Binary Search Trees 412
- Section 7: Representing Rooted Trees on Computers 415
- Chapter 17 Exercises 417

Chapter 18: Graph Traversal Problems 425

- Helicopter Tour 425
- Section 1: Euler Paths and Tours 426
- Section 2: Euler Paths and Tours in Digraphs 433
- Section 3: Application of Eulerian Digraphs: De Bruijn Sequences 435
- Section 4: Hamilton Paths and Tours 439
- Section 5: Application of Hamiltonian Graphs: Gray Codes 443
- Section 6: Sufficient Conditions for a Graph to be Hamiltonian 443
- Section 7: Necessary Conditions for a Graph to be Hamiltonian 444
- Chapter 18 Exercises 447

Appendix A: Pseudo Code Dictionary..... 457**Appendix B: Randomness and Probability..... 463****Appendix C: Answers and Brief Solutions to Selected..... 475**
Odd-Numbered Exercises**References..... 539****Index of Algorithms..... 541****Index..... 543**
